

JavaScript Full Solutions

Exercises 1-4

```
console.log('Welcome to the Community Portal');
const eventName='Music Fest'; let seats=50;
if(seats>0) seats--;
function addEvent(e){}
function registerUser(u){}
const counter=()=>{let c=0;return ()=>{++c;}}();
```

Exercises 5-8

```
class Event{constructor(name,seats){this.name=name;this.seats=seats;}}
Event.prototype.checkAvailability=function(){return this.seats>0}
let events=[]; events.push({name:'Music'});
document.querySelector('#events');
document.getElementById('btn').onclick=()=>alert('Registered');
```

Exercises 9-14

```
fetch('events.json').then(r=>r.json()).catch(console.error);
async function load(){const d=await fetch('events.json');}
const {name}= {name:'Music'};
const copy=[...events];
$('button').click(()=>$('.card').fadeIn());
```
